

[AGILITA AG]

My work:

Customer Story: [AGILITA AG], [<https://www.sap.com/documents/2024/05/b05184e3-bc7e-0010-bca6-c68f7e60039b.html>]

<i>Customer profile</i> - Professional Services and IT consulting industry - Swiss Company, recently expanded to Berlin - Won SAP MEE Award for Partner Excellence 2024 for GROW	<i>Digital transformation impacts</i> - 10-15% more time available in the project management office. - 5% lower total IT costs. - 100% transparency across projects. - 5% less administrative effort through automation.
<i>SAP solution technology areas</i> - SAP SuccessFactors - SAP Business Technology Platform (BTP) & SAP Analytics Cloud - SAP S/4 HANA Cloud Public Edition - SAP Project and Resource Management	<i>Case study material includes</i> - Executive overview, operational challenges and strategic objectives. - Executive leadership quotes and future roadmap (Joule AI & Onboarding) - Value-driven quantitative results and operational metrics.

Professional Services and IT consulting Industry Macro Trends:

1. **Public Cloud ERP Adoption** (for example, mid-sized business shifting from legacy on-premise ERPs to a completely cloud solutions like SAP S/4HANA Cloud Public Edition.)
2. **Embedded AI** (for example, using an informative digital assistant like SAP Joule and gen AI to automate reporting and consultations.)
3. **Agile Product Delivery** (for example, replacing multi-year IT implementation with rapid, cloud deployment executed in 6–9-month cycles.)
4. **Automated Intercompany Financials** (for example, the ERP systems mapping automated intercompany settlements, tax regulations, and complex multi-tier software licensing models.)
5. **Project Management** (for example, real-time analytics platforms like SAP Analytics Cloud providing live visibility into consultant availability, project margins, and utilizations.)

Customer Motivations

In the AGILITA customer story, the customer's motivations are:

- Promoting Transparency across business units and ensuring intercompany operations between Switzerland and Berlin is properly mapped and settled accurately.

- Optimizing employee onboarding and resource planning to support rapid workforce growth and a new team leader management level.

Customer Business Goals

In the AGILITA customer story, the customer's business goals are:

- **Enabling scalable workforce and talent management** (efficiently organize the growing workforce, handle the performance appraisals and streamline employee onboarding across all units).
- **Support International Expansion** (seamlessly map international operations and automate intercompany settlements between Switzerland and Berlin).
- **Improve project and resource visibility** (provide team leaders and project managers with enhanced support such as real-time data for resource planning, time tracking and reporting).

Selection & Justification of Analytical Approaches

To understand more about the customer's business goals in the AGILITA customer story, I have selected **Strengths Weaknesses Opportunities Threats (SWOT) analysis** and **Design Thinking analysis** approach.

- I chose the **SWOT analysis** because it provides a proper understanding about AGILITA's internal capabilities along with its bottlenecks that are caused by their rapid workforce growth from 92 to 190 employees. It also identifies various opportunities the business will now have for cloud expansion into Germany and threats the business might face in a new environment and also threats related to scaling complexity. I think that SWOT will lay down a basic framework about the organization's current position regarding what the business is suffering from, and what it will face in the future.
- I chose **Design Thinking analysis** approach because AGILITA's digital transformation centers heavily on the human experience, specifically onboarding, easing administrative burdens, and improving consultant usability. Design thinking focuses on empathy and targets end-user's pain points, ensuring the deployed SAP solution aligns directly with daily employee workflow. I think that by applying this approach, we can specifically target the real needs of the stakeholders (such as project managers and team leaders) rather than wasting resources on trivial things and can empathize with employees' and leaders' pain points to gain a better understanding of the problem.

SWOT Analysis

Strengths	Weaknesses
- Recognized SAP Gold partner and winner of the SAP MEE Awards for Partner Excellence 2024 for GROW. - Agile leadership with a clear strategic vision for sustainable scalability.	- Inconsistent onboarding processes for new hires and the new team leaders. - Lack of proper mapping of cross-border intercompany settlements between Switzerland and Berlin.

Opportunities	Threats
- Rising market demand for mid-market cloud ERP migrations (GROW with SAP) across Germany and Central Europe. - Integrating embedded AI (SAP JOULE) to automate repetitive administrative and reporting workflow for consultants.	- Risk of proper delivery delays and lower customer satisfaction if rapid scaling outpaces operational controls. - Regulatory and tax complexities associated with multi-country European expansion.

Selected Project Role & Contribution

Role: Functional consultant, SAP Implementation Project Team.

Role Rationale: I have chosen this role because I want to use my business process design and systems analysis skills to implement standard cloud workflow across SAP SuccessFactors and SAP projects and resource management, helping AGILITA eliminate operational bottlenecks, optimize employee onboarding and restore efficiency & transparency in the planning across their Swiss and German operations.

Scope of Work: As a Functional consultant, I will work with the AGILITA customer team to understand how SAP can help them streamline their operational processes, improving efficiency & transparency in their cross border intercompany settlements and employee onboarding. This could involve designing new processes or coming up with product solutions, to properly remove bottlenecks the organization is facing.

Core Professional Skills Brought to the Project

The key skills I will bring to the project are:

- **Business Acumen**, that is, my understanding of how the professional services and IT consulting organization manages its operations.
- **Functional Skills**, to understand the AGILITA's operational bottlenecks & pain points and how SAP could help solve them.
- **Strategic Thinking**, to help me analyze the business environment and understand the threats they might face.
- **Communication Skills**, to actively listen to project managers and team leaders, reflect on their pain points, and explain SAP cloud capabilities clearly and simply.
- **Collaboration Skills**, to work with and build effective relationships with internal project managers, team leaders, executive sponsors, and technical peers across Swiss and German offices.

Project Team Composition & Expertise Mix

To deliver the AGILITA's SAP implementation, the ideal project team would include the following roles and mix of expertise/skills:

- A **functional consultant** who has domain experience in the professional services and IT consulting organizations. They could then explain how technologies like cloud could support the AGILITA's goal to remove operational bottlenecks.
- A **technical consultant** with experience with designing and implementation of cloud solutions, specifically in this case configuration of SAP S/4HANA Cloud Public Edition and SAP Business Technology Platform (BTP). They will ensure seamless system integration and automate complex intercompany operations.
- A **Project Manager**, who would be responsible for establishing the project charter, setting up schedule, tracking milestones, managing changes across Swiss and German teams, and ensuring the team follows strict standard cloud practices.
- A **Data analyst** to work with the team to design centralized dashboards in SAP Analytics Cloud, providing leadership with real-time reporting on consultant availability, project margins, and business KPIs.

Team Collaboration Framework

The team will collaborate to deliver AGILITA's SAP implementation by:

- Planning the project including setting up goals, scope, standards, roles and responsibilities.
- Providing functional or domain insights relevant to the professional services and IT consulting industry to help the team implement best practices for project understanding, intercompany settlements and resource planning.
- Having the technical consultant work closely with the functional consultant and key users to translate functional specifications to technical specifications.
- Holding a kickoff meeting to give internal project managers, team leaders and department heads an overview of the project and the agreed cloud roadmap.
- Working with internal stakeholders to explain standard SAP cloud features and processes clearly and simply, following a 'stick to the standard' methodology.

Summary Presentation

Developed a 5-slide presentation deck summarizing the customer profile, business goals, SWOT and Design Thinking Frameworks, team collaboration structure, and future technology roadmap.
